

© THE PARTICIPATION ECONOMY

Platform Overview

How verified daily engagement creates real economic value — and flows back to the people who create it.

THE TAGLINE

Show up. Do things. Get paid.

VERSION	PLATFORM	STATUS
1.0 — June 2026	dexfuel.com	Public Overview

— THE PROBLEM

Every platform you use runs on
the same **broken model**

— THE SOLUTION

The Participation Economy

DexFuel is the infrastructure layer for a new category — a market structure where verified daily action creates measurable economic value that flows back to the people who create it.

Participate → Earn Joules → Qualify for Estimated Daily Rewards

Every verified action on DexFuel earns Joules — participation units that determine your estimated share of the daily reward pool. The more you contribute, the larger your estimated share.

This isn't passive income. It isn't staking. It isn't speculation. It's a system that measures participation and distributes estimated rewards accordingly.

⚠ Disclaimer:

Participation in the DexFuel ecosystem is not a financial investment. The estimated rewards are not guaranteed and are subject to change without notice. The system is designed to be a community-driven platform where users can earn rewards for their participation.

— HOW IT WORKS

The daily participation cycle

The Daily Cycle

- 1 Reward pool opens** — funded by platform trading fees, ad revenue, and creator campaign deposits
- 2 Participants complete verified tasks** — video, social, education, buy-in, Grid participation
- 3 Joules accumulate** — each verified action credits Joules proportional to task value
- 4 Estimated reward allocated** — at cycle close, qualified participants receive their estimated share based on Joule percentage
- 5 Cycle resets** — 24 hours, every day

Joules Explained

Joules are participation units. They are not money. They are not tokens. They are not tradable. They have no monetary value. They measure your contribution to the platform in a given cycle and determine your estimated reward share — which is variable and not guaranteed.

Tasks

- ⦿ **Video tasks** — watch creator content or sponsored brand content
- ⦿ **Social tasks** — post, share, or comment (verified via connected social account)

— TOKEN MODELS

Two ways to **launch on DexFuel**

— CHANNEL TOKEN

For creators, communities & brands

The primary product. Launches on DexFuel's bonding curve and stays there permanently — DexFuel is the home market. Every buy and sell generates creator fees. Token prices are not guaranteed to increase.

Best for: Fitness coaches, musicians, podcasters, sports teams, brands, educators

— PROJECT LAUNCH

For protocols & products

Starts on DexFuel's bonding curve. Graduation-eligible to Raydium or other DEXs once liquidity thresholds are met. All token trading involves risk of loss.

Best for: DeFi protocols, Web3 products, on-chain applications

⚠ **Disclaimer:**

— TECHNOLOGY

Built on **Solana**. Transparent by design.

Non-custodial

DexFuel never holds user funds. All trading executes through smart contracts. The platform cannot access user wallets.

Transparent bonding curves

All token pricing is determined by a public mathematical formula. No hidden market makers, no insider spreads.

On-chain verification

Participation records, trading history, and reward distributions are publicly verifiable on Solana.

Privy.io wallets

Social sign-in (Google, Apple, email). Wallets created silently. No seed phrase required to start.

OFAC screening

Every new wallet screened against OFAC sanctions lists before activation.

Solana infrastructure

Fastest, lowest-cost blockchain in production. Transactions cost a fraction of a cent.

⚠ **Disclaimer:**

— FOR CREATORS

Three things creators have never had at the same time

1 — Direct economic participation

Every buy and sell on your channel token generates a creator fee paid directly to you. Creator fee revenue is variable — it depends entirely on community trading activity. No earnings are guaranteed.

2 — Verified engagement infrastructure

Creator tasks let fans prove they showed up. On-chain verified actions that earn Joules and may qualify fans for estimated reward shares.

3 — A community economy, not just a follower count

A channel token lives on-chain with a transparent market. Token value is not guaranteed and depends on community activity. It gives dedicated members a way to participate — not invest.

Who this is built for

Fitness & Wellness

Music

Sports

Finance Education

Gaming

Podcasters

Local Brands

Education

Nonprofits

Content Creators

— FOR ADVERTISERS

Verified daily participants.

Peak attention moments.

3–5× Daily sessions per user	8+ min Average session length	90%+ Video completion rate	18+ Age gated · COPPA compliant
--	---	--	---

Our rewarded video placement sits between task completions — the highest-intent moment in a session. Users actively choose to watch to unlock their next reward. User-initiated. Reward-gated. Peak intent.

DexFuel vs Traditional Offerwall

DEXFUEL	TRADITIONAL OFFERWALL
Verified daily returning users	Install farmers & click farms
3-5 genuine sessions per day	One-time action takers
Social / Entertainment category	Rewards / Loyalty category
90%+ video completion rate	30-40% typical completion
On-chain verification layer	Pixel/postback fraud exposure
Brand-safe, moderated content	No brand safety controls
\$15-25 target eCPM	\$0.50-2 commodity CPI

Ad Formats

Rewarded Video

30s user-initiated. \$15–25 eCPM target.
AppLovin MAX SDK. Between task completions.

Sponsored Task

Brand-created participation challenge.
Verified actions. Highest engagement.
Custom pricing.

Interstitial

Full-screen between natural session breaks.

Banner

Persistent during browse sessions.

⚠ **Disclaimer:**

— TRUST & COMPLIANCE

Designed for legal defensibility

- ⦿ **Language discipline** — No "guaranteed," no "APY," no "yield," no "passive income." Every reward mention is labeled "estimated" or "variable."
- ⦿ **Age verification** — 18+ attestation required before wallet creation. No exceptions.
- ⦿ **OFAC screening** — Every new wallet screened against the OFAC SDN list before activation.
- ⦿ **GDPR / CCPA compliance** — Consent management at signup, right to erasure, data minimization.
- ⦿ **Content moderation** — All user-generated task submissions reviewed. Brand-safe content enforced.
- ⦿ **Non-custodial** — DexFuel never holds user funds. Smart contracts execute directly.
- ⦿ **Transparent reward rules** — Joule calculations, pool composition, and distribution logic are publicly documented.

⚠ **Disclaimer:** This is not an investment product and does not constitute an offer. DexFuel is a decentralized platform that provides a marketplace for digital assets. It is not responsible for losses resulting from using digital assets or smart contracts.

— ECONOMICS

Revenue from activity, not from users

Trading Fees

2% on all bonding curve transactions. Primary revenue driver.

Rewarded Video

Net revenue from AppLovin MAX and partner networks. \$15–25 eCPM target.

Premium CPA Campaigns

Verified participation campaigns from brand partners.

Creator Task Deposits

Creators fund task reward pools; platform takes 10%.

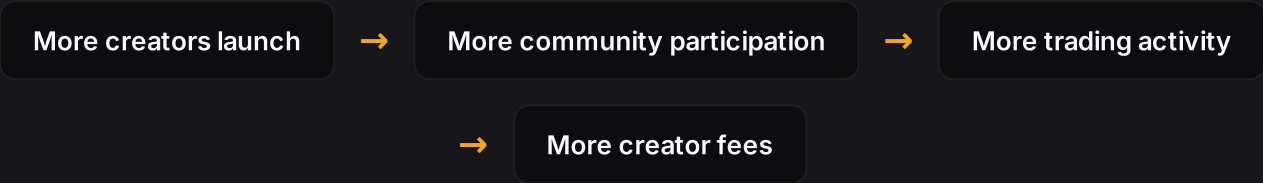

Shop

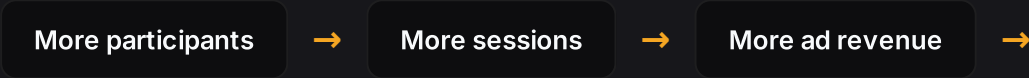

Platform items purchased with SOL.

The Flywheel

CREATOR SIDE

PARTICIPANT SIDE

Larger reward pool

Revenue and reward pool sizes are variable and not projected or guaranteed.

⚠ Disclaimer: Revenue and reward pool sizes are variable and not projected or guaranteed. The amount of revenue and reward pool sizes may vary significantly over time.

— THE VISION

The economic layer that should have **always existed**

The influencer who built 500,000 followers and gets \$0 when a brand uses their audience for targeting. The fan who shows up every day for their favorite creator and gets nothing but a notification. The community member who was there at the beginning when it was ten people and 100,000 later has no record of that contribution.

DexFuel changes all of that. Every action verified. Every contribution recorded. Every participation rewarded — in variable, estimated amounts that reflect real platform activity.

**The Participation Economy
is open.**

⚠ **Disclaimer:**

— GLOSSARY

Key terms

Joules

Participation units earned through verified actions. Determine estimated reward share. Not money, not tokens, not tradable. No monetary value.

Channel Token

Community currency on DexFuel's bonding curve. Permanent. Generates variable creator fees on trades. Token prices may decrease.

Project Launch

Token with bonding curve graduation potential. For protocols. All trading involves risk of loss.

Bonding Curve

Mathematical formula determining token price based on supply. Transparent. Prices may decrease as well as increase.

Grid

Coordinated community group. Works toward collective participation targets. Bonus rewards variable and estimated.

Daily Reward Cycle

24-hour cycle. Joules accumulate; reward pool distributes at close. Pool size varies with platform activity.

Rewarded Video

User-initiated sponsored placement. Users choose to watch to unlock estimated Joule multipliers.

Solana

The blockchain DexFuel is built on. All transactions are public, verifiable, and final.

⚠ Legal Notice

DexFuel is not an investment platform. Daily reward allocations are variable, not guaranteed, and depend on platform activity and individual participation. Joules are participation allocation units with no monetary value. Nothing in this document constitutes financial advice, an offer of securities, or a solicitation of investment. Participation in DexFuel does not guarantee earnings of any kind. Users must be 18 or older. All trading activity involves risk. Past reward distributions are not indicative of future distributions.

DexFuel operates as a technology platform. Smart contracts execute autonomously. The platform does not custody user funds. DexFuel is not responsible for losses resulting from token trading, participation activity, or changes in reward pool size.

This document may contain forward-looking statements and projections that are illustrative only. Actual results may differ materially. DexFuel makes no representations or warranties regarding the accuracy of projections or the future performance of the platform.

Token prices are determined by supply and demand on bonding curves and are not guaranteed to increase. Creator fees depend on community trading volume and are not guaranteed. Joule-based reward shares are variable and estimated.

⚠ This document: DexFuel is not an investment platform. Rewards are variable and estimated. Joules have no monetary value.
